

Licensing

- NetBrain uses a subscription license model for its network automation platform.
- The NetBrain foundation product is licensed by two metrics:
 1. By network “component”:
 - Traditional network Number of devices (by management IP address)
 - ACI: Number of leaf ports
 - NSX and ESXI Physical CPU
 2. By NetBrain seat
 - 1 seat can be shared by multiple users, but only 1 user can be logged in at a time using the same seat
- There are two additional modules that can be purchased as add-ons, using the same licensing metrics as above:
 - Change Management module
 - Application Assurance module
