

NetBrain Immersion Training: Super User

Get the Most out of NetBrain Release 11

Highlights

- Advanced in-person hands-on PDAS automation onsite training
- Classroom curriculum, workshop and testing
- Problem solving using real-world examples
- Create automation to address common problems in situation rooms
- Instructor-led classes and labs

This 4-day immersion class brings NetBrain customers together with automation experts to learn the core skills and concepts of NetBrain PDAS. Hands-On instruction addresses the top real-world automation challenges common to every enterprise. Students will learn how to:

- Create a reference workflow, use the Visual Parser, explore platform foundations (Data View, Runbook, Intent), create maps and proactively troubleshoot incidents.
- Capture network intent as business requirements.
- Verify network intents for troubleshooting tickets or during remediation.
- Enforce network intents to assure business services are continuously available at the level of performance needed.
- Scale automation to the entire network.
- Collaborate across support teams and share diagnostic results.
- Use NetBrain to achieve:
 - Proactive Problem Diagnosis
 - Application Assurance
 - Protective Change Management
 - Preventive Automation

By attending NetBrain's training, you will be better equipped to leverage your investment in NetBrain across your entire organization and include it as part of a hybrid-cloud support portfolio. Transform your organization from a tactical support model to a strategic and scalable operation.
